FORMAL ASSESSMENT

Planet Plankton

Each activity in the Estuaries 101 Middle School Curriculum is designed around specific performance tasks. A generalized set of scoring rubrics is provided to judge student progress against these performance tasks. Use the performance assessment indicators in the table below along with the suggested answers in the Teacher Guide to arrive at a score for each performance task.

In addition, you can use the attached Student Assessment handout to conduct a formal assessment at the conclusion of the activity. Use the suggested answers and performance assessment indicators to rate each student's progress.

<table>

Questions and Answers

1. Which organism is phytoplankton, A or B?
   Organism B is phytoplankton.

2. Which organism is zooplankton, A or B?
   Organism A is zooplankton.

3. How do you know which plankton is phytoplankton and which plankton is zooplankton?
   Zooplankton may have appendages such as legs, antennae, claws, etc. Phytoplankton have many different shapes but does not have appendages.

4. Plankton are necessary for survival in the estuaries because:
   b) Plankton are necessary to survival in the estuaries because they are the base of the food chain.
Reflection Question

Why is plankton important in the estuary?

Plankton is the base of the food chain, supplying food energy to higher organisms. Phytoplankton carry on photosynthesis and take carbon dioxide out of the atmosphere.
STUDENT ASSESSMENT

Planet Plankton

Almost all living things in the estuary depend directly or indirectly on plankton. What is plankton and why are they important in the estuary?

A

B

1. Which organism is phytoplankton, A or B?

2. Which organism is zooplankton, A or B?

3. How do you know which plankton is phytoplankton and which plankton is zooplankton?

4. Plankton are necessary for survival in the estuaries because:
   a) They add nutrients to the water.
   b) They are the base of the food chain.
   c) They help with decomposition.
   d) All of the above.

Reflection Question

Why are zooplankton and phytoplankton important in the estuary?
